PART 3: PRINTING ALL AVAILABLE LETTERS (1/1 point)

Next, implement the function `getAvailableLetters` that takes in one parameter - a
of letters, `lettersGuessed`. This function returns a string that is comprised of
lowercase English letters - all lowercase English letters that are **not** in `lettersGuesse`

Example Usage:

```
>>> lettersGuessed = ['e', 'i', 'k', 'p', 'r', 's']
>>> print getAvailableLetters(lettersGuessed)
abcdfghjlmnoqtuvwxyz
```

Note that this function should return the letters in alphabetical order, as in the examp
above.

For this function, you may assume that all the letters in `lettersGuessed` are lowerca

Hint: You might consider using `string.ascii_lowercase`, which is a string comprise
of all lowercase letters:

```
>>> import string
>>> print string.ascii_lowercase
abcdefghijklmnopqrstuvwxyz
```
